

PAIN POINTS IN THE GARMENT MANUFACTURING INDUSTRY

Solutions through using our Garment ERP Software

ISSUE	PAIN POINTS	SOLUTION
Inventory Inaccuracy	<p>If the inventory items are missed or wrong, the production line will have to stop and the impact will be as follows:</p> <ul style="list-style-type: none"> Delayed Deliveries Obsolete Stock Work Stoppages Excess Cash tied up 	<p>Inventory is actively managed based on everyday activities in production, wastages, purchase and sales. Throughout the production process realtime status of stock is provided.</p> <p>Since the inventory is actively managed and verified in various stages, missed inventory is a non-issue when using our Garment ERP Solution.</p>
Communication Gap	<p>This is the most happening issue in manufacturing industries where number of people in different levels are involved. Communication Gap would have impact on Production, Rework and even Quality Process.</p>	<p>Action Dashboard driven process ensures that the tasks are correctly assigned and approvals done as expected. Alerts and escalations are also integrated to ensure that the information sharing among all the employees and stakeholders are in real time. Since, the business is driven by our ERP solution, errors due to mis-communication is prevented.</p>
Wrong supply from Vendor	<p>Suppliers often delivers late, short supplies or ships wrong items. This results in</p> <ul style="list-style-type: none"> Delay in Delivery Unutilized labour (idle time) Re-order time <p>Considering the down time due to unavailability of materials, the loss of revenue and risk of delays are very critical.</p>	<p>Robust Procurement module with quality control module makes companies to overcome this situation.</p> <p>Our Garment ERP Solution ensures that each procurement is matched to the planned quantity and quality and removes most of the risk due to mismanaged vendors.</p> <p>Any deviation from the plan will immediately alert the management and stakeholders.</p>
Bottle Necks	<p>Manual Approval Process, Requires key people to be physically present to do their task. This would worsen if any of the key people are on a business trip or on holiday.</p>	<p>Cloud based Garment ERP Solution makes approval process simpler using portable electronics devices. No more physical presence and approval required. Approve anytime from anywhere.</p>
Inadequate BOM	<p>All production planning starts with a bill of materials – if that is wrong, virtually everything else affecting production will be wrong as well. Inaccuracies in a BOM such as ordering the wrong parts or the wrong quantities can result in significant problems</p> <p>Imagine when the T-Shirt consignment is in the final stage of production and the required collar rib is missing. This is a disaster, that frequently happens in the Garment Industry and is dangerous as it directly impacts the delivery schedule.</p>	<p>Our ERP Solution provides comprehensive requirement planning for materials, process, timeline and budget. Using the projected material requirement at each stage of the production, the MRP can be refined and the risks identified in the planning stage itself.</p> <p>Even if still there is any deviation, the management is alerted through SMS and emails. This helps in re-planning before the next process thus preventing deadlines, loss of material and importantly, the reputation of the company.</p>
Cost of Errors	<p>The error at each level has to be controlled by the ERP system at each stage, otherwise the cost of those errors could result in losing the order or even the customer</p>	<p>Our Garment ERP Solution has all modules integrated (from Planning to delivery to Finance and HR) so that the data flows from one to the other without mistakes and avoids repetition of work. The checks and balances implemented in all stages ensures that only correct data is accepted into the ERP System.</p>
